

DESCRIPTION

Mechanical system to ensure the closing valves by spring
 Through this system we ensure that the sampler is always kept in the closed position.
 DMS is available for 1/4", 3/8" & 1/2" three way valves and for other Manvia Sampling System equipment, to ensure a safety operation.

DMS system mounted in BS & FV

The operator must move the lever to the required position ("by-pass" or "sample") always exerting a force to maintain the position.
 Once the sample is taken, the system returns to the closed position when the lever is released. Avoiding oversights that can cause problems by leaving the system open
